

Types of RNN

1. one-to-one

Fixed Input and Output Sizes, acts as a traditional Neural N/w.

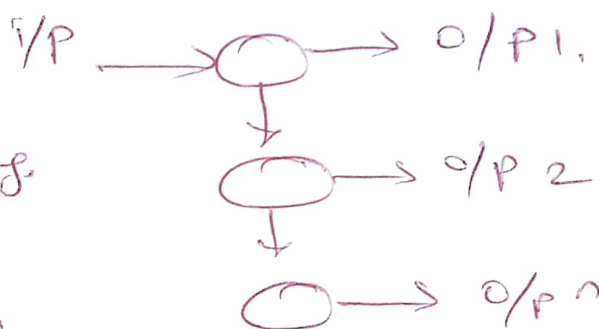

ex: Image classification

2. one-to-many.

Single Input and Multiple Output.

↳ Fixed Input size and gives a sequence of data outputs.

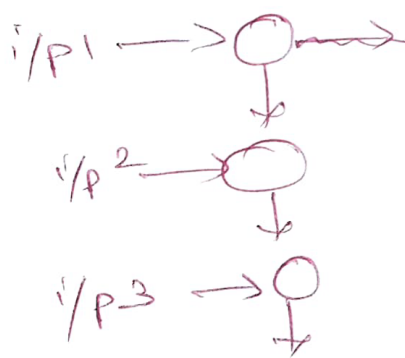

ex: Music Generation
Image Captioning

3. Many-to-one

ex: Sentiment Analysis

Takes a sequence of inputs to display a fixed output

4. Many-to-many.

a) Equal Unit Size

b) Unequal Unit Size

→ Name-Entity Recognition

Application - Machine translation
